COVER MEMO

Summary Memo—July 30, 2020

The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States

Partners: Northeastern University, Harvard University, Rutgers University, and Northwestern University

Authors: David Lazer (Northeastern University); Katherine Ognyanova (Rutgers University); Matthew A. Baum (Harvard University); Alexi Quintana (Northeastern University); John Della Volpe (Harvard University); James Druckman (Northwestern University); Roy H. Perlis (Harvard Medical School); Mauricio Santillana (Harvard Medical School); Hanyu Chwe (Northeastern University); and Matthew Simonson (Northeastern University)

From July 10 to 26 we conducted the seventh wave of a large, 50-state survey, some results of which are presented in this report. This is the sixth report published by the consortium. You can find previous reports online at www.covidstates.org.

Note on methods:

We surveyed 19,052 individuals across all 50 states plus the District of Columbia. The survey was conducted on 10-26 July 2020 by PureSpectrum via an online, nonprobability sample, with state-level representative quotas for race/ethnicity, age, and gender (for methodological details on the other waves, see covidstates.org). In addition to balancing on these dimensions, we reweighted our data using demographic characteristics to match the U.S. population with respect to race/ethnicity, age, gender, education, and living in urban, suburban, or rural areas. This was the seventh in a series of surveys we have been conducting since April 2020, examining attitudes and behaviors regarding COVID-19 in the United States.

Note that Wyoming, North Dakota, South Dakota, and Vermont have relatively smaller sample sizes (under 200 likely voters) and therefore larger margins of error. Results concerning those states should be interpreted with caution.

3. State tables.....	8
Table 1. Would you support making it easier to vote by mail in November?	8
Table 2. When you vote in November, how likely is it that you will vote by absentee or mail-in ballot?	11

1. Support for voting by mail

Overall, support for voting by mail is quite high, with 64% of likely voters in our survey¹ supporting making it easier to vote by mail, and only 23% opposing.

Similarly, more Americans who say they plan to vote in 2020 support than oppose universal extension of vote by mail. A total of 66% of likely voters report that they would support giving every American the right to vote by mail in November, with 22% opposing.

Table 1 and Figure 1 summarize support for making voting by mail easier, and for giving every American the right to vote by mail.

Figure 1. Universal right to vote by mail

Would you support giving every American the right to vote by mail in November? [Percent respondents planning to vote]

National sample, N =1,881, Time period: 7/10/2020-7/26/2020

2. Utilization of voting by mail

The unprecedented scale of the potential use of voting by mail in 2020 presents challenges for some states in the administration of the election in November. In response to the question: "When you vote in November, how likely is it that you will vote by absentee or mail-in ballot?", 41% of respondents who say they plan to vote in 2020 responded "very

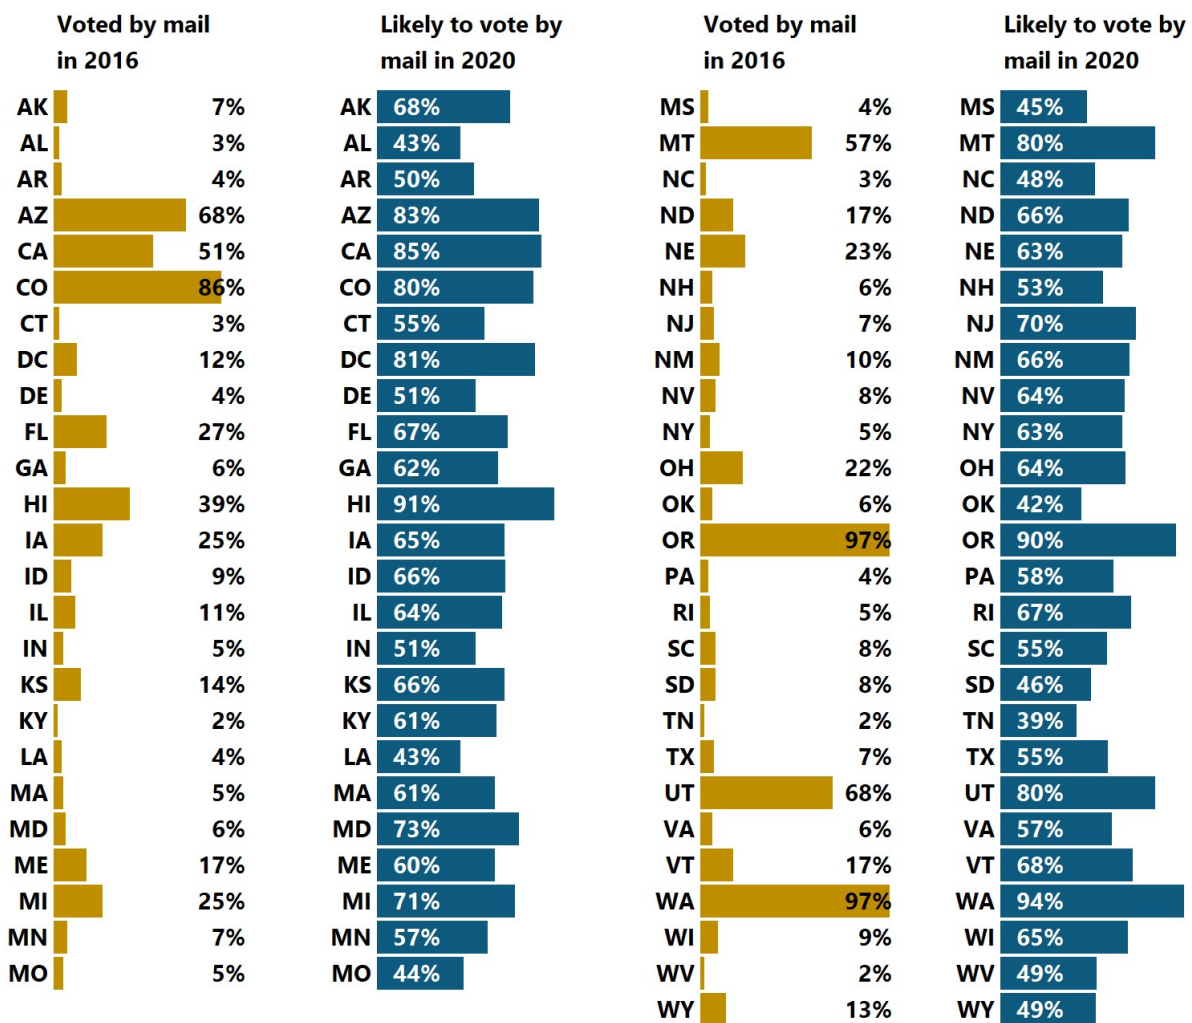

¹ "Likely voters" here refers to survey participants who responded to the question "Do you plan to vote in the 2020 U.S. presidential election?" with "Yes, I will definitely vote".

likely” and another 23% chose “somewhat likely.” As a point of contrast, only 21% of voters cast their ballots by mail in 2016 -- which itself was a historic high.²

Figure 2 presents the proportion of likely voters who say that it is “very” or “somewhat” likely that they will vote by mail in 2020, compared to the numbers who voted by mail in 2016; Figure 3, in turn, presents a heat map of expected utilization rates by state.

Figure 2. Voting by absentee or mail-in ballot this November

[Percent respondents planning to vote who say "somewhat likely" or "very likely"]

National sample, N = 19,058, Time period: 7/10/2020-7/26/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: Northeastern University, Harvard University, Rutgers University, and Northwestern University) www.covidstates.org
 2016 numbers are based on Pew Research Center analysis of IPUMS and US Census data.

² See: <https://www.pewresearch.org/fact-tank/2020/06/24/as-states-move-to-expand-the-practice-relatively-few-americans-have-voted-by-mail/>

The comparison between 2016 highlights the potential for an enormous leap in voting by mail. There are 7 states where a majority of people voted by mail in 2016. These states will see more modest increases in 2020. However, more typical is a case like New York, where 5% of voters reported casting a ballot by mail in 2016, and 63% of those who say they plan to vote in 2020 currently state that they are likely to vote by mail. The continued struggles of New York³ and other states in processing primary voting by mail is a worrisome harbinger for the general election.
